# EV MARKET STRATEGIC ANALYSIS

*Regional sales • EFE / IFE scores • SWOT overview*

| EFE TOTAL WEIGHT | IFE TOTAL WEIGHT | TOP REGION | TOP VEHICLE |
|---|---|---|---|
| 1 | 1 | Europe<br>$66.39M sales | Car<br>$53.26M sales |

**REGIONAL SALES**

| Region | Sales | Count | Sales / Record |
|---|---|---|---|
| Asia | $62,272,774 | 133 | $468,216 |
| North America | $39,477,367 | 82 | $481,431 |
| Oceania | $19,980,760 | 49 | $407,771 |
| Europe | $66,391,140 | 154 | $431,111 |

**VEHICLE TYPE SALES**

| Vehicle Type | Sales | Share |
|---|---|---|
| Bus | $45,149,517 | 24.0% |
| Car | $53,264,606 | 28.3% |
| SUV | $43,627,338 | 23.2% |
| Truck | $46,080,580 | 24.5% |

## SWOT OVERVIEW

### STRENGTHS

Factors such as trade-in capabilities and areas where analytics show price control in the larger market can provide advantages. It is beneficial to utilize lower costs, subsidize expenses, or find cost-friendly alternatives for features such as SNS, GPS, and hybrid systems. Many companies with production facilities and warehouses can be used as hub lots for fleet management. Normally, this happens when the nearby market has existing knowledge in guidance, problem-solving, and managing complexities. Trade-in capability has a weight of 0.15 (15%) within IFE.

### WEAKNESSES

Manufacturing and sourcing for car pricing involve cost drivers such as batteries, car parts, materials, and alternatives. These costs can affect whether the business targets a smaller buyer group or a wider audience. Manufacturing and sourcing dependence has a weight of 0.20 (20%) within IFE.

### OPPORTUNITIES

Educating and building knowledge in this area can create superiority through cross-functional infrastructure, including material costs, labor units, technology expenses, and battery-related costs. Maintaining knowledge across these areas can help minimize overhead while strengthening customer-centric fulfillment projects, such as accommodating different shapes and sizes of EV cars. Lastly, introducing a readiness team can help prepare for and solve customer problems with minimal help from stringent suppliers and Kelsier. Knowledge as market superiority has a weight of 0.20 (20%) within EFE.

### THREATS

The EV market is auto-centric and highly competitive. Large-scale production and pricing can create barriers for new entrants. Established manufacturers can use brand trust, customer loyalty, globalization, and growth to strengthen their position. Globalization and growth has a weight of 0.20 (20%) within EFE.

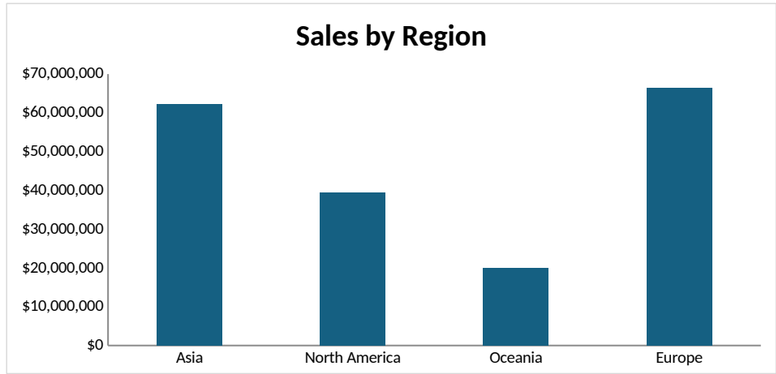

**SWOT Summary**

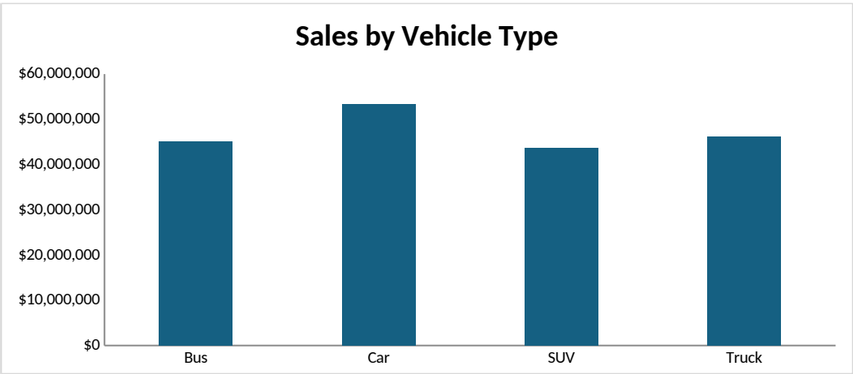

| Matrix | Total Weight | Interpretation | Key Driver |
|---|---|---|---|
| EFE | | 1.00 Weights total 100% | Knowledge areas & Trade-in opportunities |
| IFE | | 1.00 Weights total 100% | Knowledge areas & Trade-in capabilities |

**Summary**

*Summary:*
*I used key-value pairs from similar data specifications, such as type and user requirements. With this, I can assign a region and sales target to each hierarchical expectation. This is a singular search, so I based it on a simple relational aspect involving Asia, North America, Oceania, and Europe, with Europe as the highest contributor.*

*Graph 1 Modifiers: Bar plot shows legends x: 'Regions' and y: 'Total sales'.*
*Graph 2 Modifiers: Bar Plot shows legends x: 'Type' and y: 'Total Sales'.*

| SWOT ANALYSIS — IFE & EFE INTEGRATION | | | | | | | |
|---|---|---|---|---|---|---|---|
| SWOT Key | Matrix | Factor | Weight | Market Size | Weight-only Score | Interpretation | SWOT |
| S1 | IFE | Knowledge in this area / market superiority | 0.20 | Medium-large | 0.20 | Existing knowledge supports guidance, problem-solving, analytics, and market complexities. | Strength |
| S2 | IFE | Trade-in capability | 0.15 | Medium | 0.15 | Trade-in capabilities can support pricing flexibility and customer acquisition. | Strength |
| S3 | IFE | Multiple vehicle / brand options | 0.25 | Large | 0.25 | Multiple EV options can support customer-centric fulfillment across different needs. | Strength |
| S4 | IFE | Regional market presence | 0.10 | Low impact | 0.10 | Regional presence and hub lots can support fleet management and customer access. | Strength |
| W1 | IFE | Manufacturing & sourcing dependence | 0.20 | Medium-large | 0.20 | Battery, parts, materials, and sourcing costs can reduce pricing and market flexibility. | Weakness |
| W2 | IFE | Dependence on incentives / subsidies | 0.10 | Low impact | 0.10 | Reliance on subsidies can expose affordability and pricing to policy changes. | Weakness |
| O1 | EFE | EV subsidies & renewable-energy incentives | 0.20 | Medium-large | 0.20 | Incentives can lower costs and improve EV affordability and adoption. | Opportunity |
| O2 | EFE | Trade-in market opportunities | 0.15 | Medium | 0.15 | Trade-in programs can expand buyer access and support customer conversion. | Opportunity |
| O3 | EFE | Knowledge in this area as market superiority | 0.20 | Medium-large | 0.20 | Cross-functional knowledge of material, labor, technology, and battery costs can reduce overhead, support customer fulfillment and readiness teams, and reduce reliance on stringent suppliers and Kelsier. | Opportunity |
| T1 | EFE | Globalization and Growth | 0.20 | Medium-large | 0.20 | Established manufacturers can use scale, brand trust, pricing power, and global growth to raise barriers for newer EV entrants. | Threat |
| T2 | EFE | Manufacturing & sourcing pressures | 0.15 | Medium | 0.15 | Supply and production pressures can increase costs and limit operating flexibility. | Threat |
| T3 | EFE | Economic conditions affecting EV affordability | 0.10 | Low impact | 0.10 | Economic pressure can reduce buyer affordability and EV demand. | Threat |

| MARKET SIZE KEY — BASED ON WEIGHT | | | |
|---|---|---|---|
| Level | Market Size | Weight | Basis |
| 4 | Large | > 0.20 | Weight only |
| 3 | Medium-large | 0.20 | Weight only |
| 2 | Medium | 0.15 | Weight only |
| 1 | Low impact | 0.10 | Weight only |

| COMMENT |
|---|
| These weights combine educated estimates with findings from similar past studies of businesses in sustainable energy. Meanwhile, this assessment is completed, in motion, by a subject matter expert after viewing the customer's initial meeting. These identifications have been to assess correct attributes in real-time. |
